Question

incoming question from Hungary.

new production of bullets covered with polymer powder (i.e. plastic).

advantage being no contact with lead during loading operations.

off course being out of the period, well after the cut off date.

this matter must be considered on two angles :

1 - is it a necessary evolution for shooters health ?

2 - are we opening a can of worms, accepting something 126 years after the cut off date ?

Remarks

Pictures attached to original inquiry

VOLUNTEER EPRX

Balles pour poudre noire et poudre noire ARES .451/450 Voluntee
Revêtement EPRX - balles colorées coulées en plomb avec base no
peinte.
